

Part 1 — convergence test: allowedK and integerK k-values approach each other at high k
but carry different FCB boundary conditions (v_r^∞ differs)

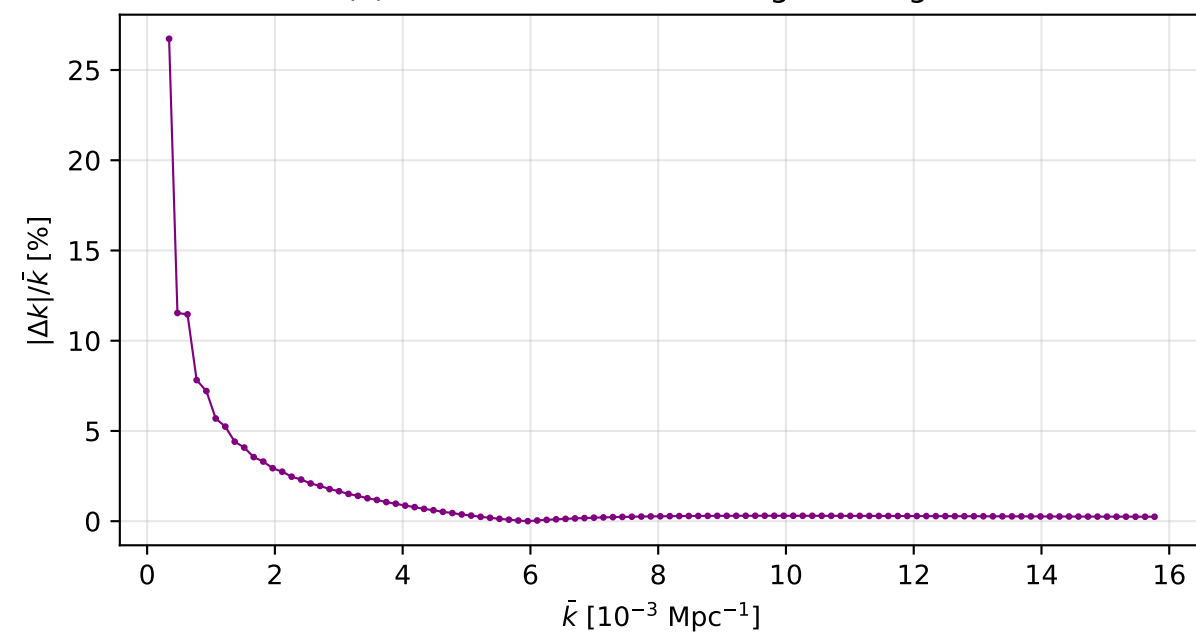

(a) k-values: allowedK vs integerK

(b) Absolute Δk (converges at high k)

(c) Relative $\Delta k/k$ — converges at high k

(d) FCB value $|v_r^\infty|$: allowedK ≈ 0 , integerK $\neq 0$
